[Note: Due to insufficient memory issue, the collaborative filtering program was executed for across first 100 records. The program requires a minimum of 4GB to hold the data into memory. On the contrary my machine had 1GB RAM.]

The prediction for record 99 is: 2.9739316

The prediction for record 100 is: 3.7030966

The prediction for record 101 is: 3.6774955

The total number of records executed is 101

The root mean square prediction is: 1.1390206

The absolute mean prediction is: 0.21887231

The collaborative filtering program calculates the prediction for each movie record and gives an aggregated root mean square and absolute mean predictions.
